

## Voice Services

Would you like to make the calls?

Design a voice service to match your needs. From landlines to SIP lines, from PBX extensions to 0800 numbers, create a system that seamlessly connects your offices, floors, teams with each other, and (most importantly) your customers.

We're big enough to cover every issue and strategic vision, yet small enough to actually care about it even to our own detriment. Helping since 2009, you'll never be a number to us. But we'll happily give out our CEO's number.

### Managed SIP / VoIP Voice

Communicate in real time with our own network SIP digital voice lines.

### Hosted / Onsite PBX

Make, receive and transfer calls with our managed PBX. Have us manage and host it in our data centre, or help you host it onsite.

### Legacy PSTN Voice

Use PSTN landline, voice mail and smart phone services where fibre and SIP digital voice services aren't available.

## We own it

Your end-to-end IT provider and partner: We own our network and any problems that arise. Big enough to take care of it yet small enough to care about you and your business, we offer six all-encompassing areas of IT solutions.

## How can we help?

Book a chat and we'll be over with the coffee.
